

ABSTRACT OF THE DISCLOSURE

A small memory card with a monitor includes a substrate, at least one memory chip, at least one monitor, and a glue layer. The substrate is formed with an upper surface and a lower surface, the upper surface is formed with a plurality of connected points and a plurality of golden fingers electrically connected to the plurality of connected points. The substrate is used to arrange in an electric device, the memory chip, which is mounted on the upper surface of the substrate, electrically connected to the plurality of connected points of the upper surface, The monitor is mounted on the side of the upper surface of the substrate, so that the aspect and location of the plurality of the golden fingers may be recognized. The glue layer is encapsulated and protected the memory chip. Thus, the display of the monitor may be recognized the operating aspect.
